TEST REPORT DECLARATION

Applicant : Kaer Technology Co.,Ltd.

Address : No.230, Wei 20th Road, Yueqing Economic Development Zone,

Zhejiang Province, China

Manufacturer : Kaer Technology Co.,Ltd.

Address : No.230, Wei 20th Road, Yueqing Economic Development Zone,

Zhejiang Province, China

EUT Description : Wiring duct

Model No. : KR5040

Remark : N/A

Test Procedure Used:

EN 50085-1:2005+A1:2013

The results of this test report are only valid for the mentioned equipment under test. The test report with all its sub-reports, e.g. tables, photographs and drawings, is copyrighted. Unauthorized utilization, especially without permission of the test laboratory, is not allowed and punishable. For copying parts of the test report, a written permission by the test laboratory is needed.

The test results of this report relate only to the tested sample identified in this report.

Date of Test : Feb.21, 2023

	EN 50085-1:2005+A1:2013		
Clause	Requirement-Test	Result-Remark	Verdict
1	Scope		P
	Replacement:		P
	This European Standard specifies requirements and tests for		
	cable trunking systems (CTS) and		
	cable ducting systems (CDS) intended for the		
	accommodation, and where necessary for the		
	electrically protective separation, of insulated conductors,		
	cables and possibly other electrical		
	equipment in electrical and/or communication systems		
	installations. The maximum voltage of		
	these installations is 1 000 V a.c. and 1 500 V d.c.		
	These systems are intended for mounting underfloor,		
	flushfloor or onfloor.		
	This standard does not apply to CTS/CDS which are		
	intended to be fixed to the wall and		
	supported by the floor.		
	This standard does not apply to conduit systems, cable tray		
	systems, cable ladder systems, power		
	track systems or equipment covered by other standards.		
	This standard shall be used in conjunction with EN		
	50085-1:2005, Cable trunking systems and		
	cable ducting systems for electrical installations – Part 1:		
	General requirements, which is referred		
	to in this document as Part 1.		
2	Normative references		P
	This clause of Part 1 is applicable except as follows:		P
	Add the following normative references:		
	EN 60068-2-60 1996 Environmental testing - Part 2:		
	Tests - Test Ke: Flowing mixed		
	gas corrosion test (IEC 60068-2-60:1995)		
	EN 60068-2-75 1997 Environmental testing - Part 2-75:		
	Tests - Test Eh: Hammer		
	tests (IEC 60068-2-75:1997)		
3	Definitions		P
	This clause of Part 1 is applicable except as follows:		P
3.1	Replace the note by:		P
3.1	NOTE Different types of CTS are shown in Figure 101 and		1
	explained in Clause A.2.		
2.2	*		P
3.2	Replace the note by: NOTE Different types of CDS are shown in Figure 101 and		P
	explained in Clause A.2.		
3.3	Add:		P
	f) service unit		
	Replace the note by:		
	NOTE A system does not necessarily include all system		
	components a) to f). Different combinations of system		
	components may		

	EN 50085-1:2005+A1:2013		
Clause	Requirement-Test	Result-Remark	Verdict
	be used.		
	Additional subclauses:		P
	3.101		
	underfloor CTS/CDS		
	CTS/CDS whose components, except access units and		
	service units, are intended to be mounted within		
	or under a floor and in normal use are not exposed to traffic		
	loads (Figures 102a), 102c) and 103)		
	3.102		
	flushfloor CTS/CDS		
	CTS/CDS whose components, except access units and		
	service units, are intended to be mounted flush		
	such that the height above the upper level of the floor		
	covering is not more than 4 mm. The upper surface		
	is considered to be exposed to traffic loads (Figures 102b)		
	and 104)		
	3.103		
	onfloor CTS/CDS		
	CTS/CDS whose components are intended to be mounted		
	on a floor such that the height above the upper level of the floor covering is greater than 4 mm. The upper		
	surface is considered to be exposed to traffic		
	loads (Figures 102d) and 105)		
	3.104		
	access unit		
	system component intended to provide access to insulated		
	conductors or cables		
	3.105		
	service unit		
	system component intended for incorporation of one or		
	more apparatus either directly or by means of one		
	or more apparatus mounting devices		
	3.106		
	service unit, when not in use		
	service unit which has no cables connected to electrical		
	equipments		
	3.107		
	service unit, when in use		
	service unit which has cables connected to electrical		
4	General requirements		P
-	This clause of Part 1 is applicable.		P
5	General conditions for tests		P
	This clause of Part 1 is applicable		P
6	Classification		P
U	This clause of Part 1 is applicable except as follows:		P
	Additional subclauses:		1
	6.101 According to floor treatment		
	6.101.1 CTS/CDS for dry-treatment of floor		
L	office of the control		

	EN 50085-1:2005+A1:2013		
Clause	Requirement-Test	Result-Remark	Verdict
	6.101.2 CTS/CDS for wet-treatment of floor when the		
	service unit is not in use		
	6.101.3 CTS/CDS for wet-treatment of floor when the service unit is in use		
	6.102 According to resistance to vertical load applied		
	through small surface area		
	6.102.1 CTS/CDS for 500 N		
	6.102.2 CTS/CDS for 750 N		
	6.102.3 CTS/CDS for 1 000 N		
	6.102.4 CTS/CDS for 1 500 N		
	6.102.5 CTS/CDS for 2 000 N		
	6.102.6 CTS/CDS for 2 500 N		
	6.102.7 CTS/CDS for 3 000 N		
	6.103 Optional classification according to resistance to		
	vertical load applied through		
	large surface area		
	6.103.1 CTS/CDS for 2 000 N		
	6.103.2 CTS/CDS for 3 000 N		
	6.103.3 CTS/CDS for 5 000 N		
	6.103.4 CTS/CDS for 10 000 N		
7	6.103.5 CTS/CDS for 15 000 N		P
7	Marking and documentation		
	This clause of Part 1 is applicable except as follows:		P
	Additional subclauses:		
	7.101 Access units and service units of systems classified according to 6.101.1 shall be marked		
	that they are suitable for dry treatment of floor only. The		
	marking shall be visible by the user which		
	may be achieved by opening the cover.		
	NOTE This marking may be in the form of text or graphic.		
	7.102 Service units shall be marked with a warning about		
	the potential damage to electrical		
	accessories by closing the cover. The marking shall be		
	visible by the user which may be achieved		
	by opening the cover.		
	NOTE This marking may be in the form of text or graphic.		
	7.103 Compliance with 7.101 and 7.102 is checked by		
8	inspection. Dimensions		P
0			
	This clause of Part 1 is applicable except as follows:		P
	Addition: There are no dimensions requirements.		
9	Construction		P
	This clause of Part 1 is applicable except as follows:		P
	Additional subclauses:		
	9.101 Access covers of underfloor, flushfloor and onfloor		P
	CTS/CDS, which in normal use are		
	subjected to external mechanical loads, shall resist		
	movement and unintentional opening.		
	Compliance is checked by inspection and by the tests of		

Clause Requirement-Test Result-Remark Verdic		EN 50085-1:2005+A1:2013		
10.5. 9.102 Service units installed flushfloor shall protect the installed electrical apparatus and the plug from direct impact when in use. This protection shall be effective and shall not cause damage to the outgoing cable. Compliance is checked by inspection and by the tests of 10.3. 9.103 It shall be possible to securely fix: - service units to the system; - electrical apparatus to the service units. Compliance is checked by the tests of 10.3 and 10.5.1. 9.104 When the service unit is not in use, it shall be possible to close openings intended for the passage of cables. Openings, when in use, in underfloor and flushfloor CTS/CDS, for the passage of cables, need not be closed if one of its dimensions is less than 20 mm in one direction. Compliance is checked by inspection and measurement. 9.105 Underfloor and flushfloor CTS/CDS which in normal use are embedded in screed material shall be protected against ingress of the screed material. Openings leading to the interior of underfloor and flushfloor CTS/CDS which in normal use, are located below the upper level of the floor without covering, shall not be wider than 7 mm in one direction. Compliance is checked by inspection and measurement. 9.106 CTS/CDS declared according to 6.101.2 and 6.101.3 shall avoid water coming into contact with insulated conductors and live parts during wet-treatment of floor by one or a combination of the following methods which may vary within the system: - method 1: ensuring by design that water does not come into contact with insulated conductors and live parts when the water level is 10 mm above the upper level of the floor covering; - method 2: providing an IP rating not less than IPX4; - method 3: providing manufacturer's instructions which require that insulated conductors and live parts are positioned not less than 10 mm above the upper level of the floor covering. For method 1 compliance is checked by inspection. 9.107 Access cover of service unit, if any, shall withstand repeated opening and closing as in	Clause		Result-Remark	Verdict
9.102 Service units installed flushfloor shall protect the installed electrical apparatus and the plug from direct impact when in use. This protection shall be effective and shall not cause damage to the outgoing cable. Compliance is checked by inspection and by the tests of 10.3. 9.103 It shall be possible to securely fix: - service units to the system; - electrical apparatus to the service units. Compliance is checked by the tests of 10.3 and 10.5.1. 9.104 When the service unit is not in use, it shall be possible to close openings intended for the passage of cables. Openings, when in use, in underfloor and flushfloor CTS/CDS, for the passage of cables, need not be closed if one of its dimensions is less than 20 mm in one direction. Compliance is checked by inspection and measurement. 9.105 Underfloor and flushfloor CTS/CDS which in normal use are embedded in screed material shall be protected against ingress of the screed material. Openings leading to the interior of underfloor and flushfloor CTS/CDS which in normal use, are located below the upper level of the floor without covering, shall not be wider than 7 mm in one direction. Compliance is checked by inspection and measurement. 9.106 CTS/CDS declared according to 6.101.2 and 6.101.3 shall avoid water coming into contact with insulated conductors and live parts during wet-treatment of floor by one or a combination of the following methods which may vary within the system: - method 1: ensuring by design that water does not come into contact with insulated conductors and live parts when the water level is 10 mm above the upper level of the floor covering; - method 2: providing an IP rating not less than IPX4; - method 3: providing manufacturer's instructions which require that insulated conductors and live parts - are positioned not less than 10 mm above the upper level of the floor covering For method 1 compliance is checked by measurement. For method 2 compliance is checked by inspection. 9.107 Access cover of service unit, if any, shall withsta		•		
installed electrical apparatus and the plug from direct impact when in use. This protection shall be effective and shall not cause damage to the outgoing cable. Compliance is checked by inspection and by the tests of 10.3. 9.103 It shall be possible to securely fix: - service units to the system: - electrical apparatus to the service units. 	lengths or ducting lengths with the		
	relevant system component, if any, to fulfil the various		
	functions of the system and prepared		
	according to the manufacturer's instructions. More than		
	one assembly may be necessary to fulfil		
	the various functions of the system. In each direction, the		
	length L of trunking length or ducting		
	length coming out of the functional area associated with the		
	function of the system is as long as		
	the width W of the trunking length or ducting length, or 250		
	mm, whichever is the greater. The		
	tolerance of L is \pm 25 mm.		
	NOTE 1 Functional area refers, for example, to a fitting, an		
	apparatus mounting device or a junction as shown in		
	Figure 106. The samples are mounted on a rigid smooth support such as		
	a plywood board 16 mm thick, with a		
	50 mm minimum spacing between the assembly and the		
	edge of the support.		
	NOTE 2 For flushfloor CTS/CDS additional provision may		
	be included, if necessary, to simulate the influence of the		
	floor material on the side of the product.		
	NOTE 3 Other system components may be included, if		
	necessary, to prevent movements. These system components		
	are the system components to terminate the trunking length		
	or ducting length, if any. When there is no such system		
	component, a system component chosen by the		

	EN 50085-1:2005+A1:2013		
Clause	Requirement-Test	Result-Remark	Verdict
	manufacturer is used.		
	Examples for arrangement are shown in Figure 107.		
	Before the test non metallic system components and		
	composite system components are aged at a		
	temperature declared according to Table 3 for (168 \pm 4) h		
	continuously.		
	10.3.2.102 The impact test apparatus according to Clause 4		P
	of EN 60068-2-75:1997, is mounted		
	on a solid wall or structure providing sufficient support.		
	The samples are placed in a cabinet at a temperature		
	declared according to Table 2.		D
	10.3.2.103 After 2 h, each sample is, in turn, removed from		P
	the cabinet and immediately placed in		
	position in the impact test apparatus.		
	At $12 \text{ s} \pm 2 \text{ s}$ after the removal of the sample from the		
	cabinet the hammer is allowed to fall so that		
	an impact is applied as far as possible perpendicular to the		
	accessible region of the sample likely		
	to be the weakest. Compliance with impact applied before		
	10 s provides also compliance with this test of the standard.		
	NOTE 1 The region likely to be the weakest can be on the		
	relevant system component but can also be on a trunking		
	length or a ducting length.		
	No impact is applied to knockouts, membranes and the like.		
	No impact is applied within 50 mm of any open extremity		
	of the sample.		
	NOTE 2 When an other system component has been		
	included at an extremity of the sample to prevent		
	movements,		
	this extremity is still considered open.		
	Instead of placing the samples in a cabinet and applying the		
	impact at 12 s \pm 2 s after the removal		
	of the sample from the cabinet, it is allowed to apply the		
	impact in a climatic chamber at a		
	temperature declared according to Table 2 on samples		
	placed at this temperature for 2 h.		
	Compliance in the climatic chamber is sufficient. In case of		
	failure in the climatic chamber,		
	compliance using the cabinet provides compliance with the		
	standard.		
	10.3.2.104 After the test		P
	- the assemblies shall show no cracks or similar damage		
	visible to normal or corrected vision without		
	magnification and		
	- the assemblies shall remain intact and		
	- the service unit cover shall be in a position		
	such that safety is not impaired.		
	In case of doubt, the test of 14.1.3 is carried out on the		

	EN 50085-1:2005+A1:2013		
Clause	Requirement-Test	Result-Remark	Verdict
	impacted samples to check that the		
	declared degree of protection against access to hazardous		
	parts is maintained. The declared		
	degree of protection against access to hazardous parts is		
	either the additional letter directly		
	declared by the manufacturer according 6.7.3, if any, or the		
	degree of protection against access to		
	hazardous parts indirectly declared by the manufacturer		
	according 6.7.1.		
10.4	Not applicable.		P
10.5	External mechanical load test		P
	Addition:		
	10.5.101 Underfloor CTS/CDS, flushfloor CTS/CDS and		P
	onfloor CTS/CDS shall have sufficient		
	mechanical strength against external mechanical loads		
	likely to occur during transport, storage,		
	installation and normal use.		
	Compliance is checked by the tests of 10.5.102, 10.5.103		
	and 10.5.104.		
	Any part for temporary use only during the installation		
	phase does not need to comply with these tests but		
	may be included for the test of 10.5.102 to allow		
	compliance of other parts.		
	A summary of tests is given in Annex AA.		
	10.5.102 Load test for installation		P
	The test is carried out on an assembly made of one or more		
	trunking lengths or ducting lengths		
	with the relevant system component, if any, to fulfil the		
	various functions of the system and		
	prepared according to the manufacturer's instructions.		
	More than one assembly may be necessary		
	to fulfil the various functions of the system. In each		
	direction, the length L of trunking length or		
	ducting length coming out of the functional area associated		
	with the function of the system is as		
	long as the width W of the trunking length or ducting		
	length, or 500 mm, whichever is the greater.		
	The tolerance of L is \pm 25 mm.		
	NOTE 1 Functional area refers, for example, to a fitting, an		
	apparatus mounting device or a junction as shown in Figure 106.		
	The samples are mounted on a horizontal rigid smooth		
	support such as a plywood board 16 mm		
	thick, with a 50 mm minimum spacing between the		
	assembly and the edge of the support.		
	NOTE 2 Other system components may be included, if		
	necessary, to prevent movements. These system components		
	are the		
	system components to terminate the trunking length or		

	EN 50085-1:2005+A1:2013		
Clause	Requirement-Test	Result-Remark	Verdict
	ducting length, if any. When there is no such system		
	component, a system		
	component chosen by the manufacturer is used.		
	Examples for arrangement are shown in Figure 107.		
	Before the test non metallic system components and		
	composite components are aged at a		
	temperature declared according to Table 3 for (168 \pm 4)		
	h continuously.		
	A vertical force is applied centrally for 120 s \pm 5 s to a		
	steel cube of 50 mm \pm 0,5 mm with an edge		
	radius of approximately 1 mm.		
	The cube is placed approximately in the middle of the		
	length of the sample and in the most		
	unfavourable position in the width of the sample. In the case of multi-compartment CTS/CDS		
	whose partition(s) provide support, the middle of the largest		
	compartment is selected.		
	To allow for settlement of the sample, a pre-load of 25 N		
	± 5 N is applied and then the		
	measurement apparatus is calibrated to zero.		
	For the test of CTS/CDS intended to be installed underfloor		
	under a raised floor a force of		
	250 N (+ 10 N, 0) is applied.		
	For the test of CDS intended to be embedded underfloor and		
	CTS/CDS intended to be installed		
	flushfloor a force of 750 N (+ 30 N, 0) is applied except on		
	parts of which the cover remains visible		
	and above the floor level during the whole installation phase		
	for which a force of 250 N (+ 10 N, 0)		
	is applied.		
	During the test the vertical displacement of the cube shall be less than 25 mm.		
	Cracks are allowed but the maximum vertical displacement		
	of the cube shall not be exceeded.		
			P
	10.5.103 Load test for application - Force applied through small surface area		P
	The test is carried out on an assembly made of one or more		
	trunking lengths or ducting lengths		
	with the relevant system component, if any, to fulfil the		
	various functions of the system and		
	prepared according to the manufacturer's instructions.		
	More than one assembly may be necessary		
	to fulfil the various functions of the system. In each		
	direction, the length L of trunking length or		
	ducting length coming out of the functional area associated		
	with the function of the system is as		
	long as the width W of the trunking length or ducting		
	length, or 500 mm, whichever is the greater.		1

	EN 50085-1:2005+A1:2013		
Clause	Requirement-Test	Result-Remark	Verdict
	The tolerance of L is \pm 25 mm.		
	NOTE 1 Functional area refers, for example, to a fitting, an		
	apparatus mounting device or a junction as shown in Figure 106.		
	The samples are mounted on a horizontal rigid smooth		
	support such as a plywood board 16 mm		
	thick, with a 50 mm minimum spacing between the		
	assembly and the edge of the support.		
	NOTE 2 For flushfloor CTS/CDS additional provision may		
	be included, if necessary, to simulate the influence of the		
	floor		
	material on the side of the product.		
	NOTE 3 Other system components may be included, if		
	necessary, to prevent movements. These system components are the		
	system components to terminate the trunking length or		
	ducting length, if any. When there is no such system		
	component, a system		
	component chosen by the manufacturer is used.		
	Examples for arrangement are shown in Figure 107.		
	Before the test non metallic system components and		
	composite system components are aged at a		
	temperature declared according to Table 3 for (168 \pm 4) h		
	continuously.		
	The surface of the sample which can be exposed to traffic is		
	loaded with the force declared		
	according to 6.102.		
	A vertical force is applied through a steel cylinder of 13,3		
	mm ± 0.1 mm diameter with an edge		
	radius of 1 mm providing a contact surface of		
	approximately 1 cm2 with a minimum length of 30 mm (Figure 108).		
	The cylinder is placed approximately in the middle of the		
	length of the sample and in the most		
	unfavourable position in the width of the sample. In the case		
	of multi-compartment CTS/CDS		
	whose partition(s) provide support, the middle of the largest		
	compartment is selected.		
	To allow for settlement of the sample, a pre-load of 50 N		
	\pm 10 N is applied and then the		
	measurement apparatus is calibrated to zero.		
	The force is gradually increased up to the value declared		
	according to 6.102 with a tolerance		
	$(+4\%, 0)$ over 15 s \pm 5 s and maintained for 60 s \pm 1 s.		
	During the test the samples shall show no deflection greater		
	than 6 mm. After the tests the		
	samples shall show no signs of disintegration, nor shall		
	there be any crack visible to normal or		

	EN 50085-1:2005+A1:2013		
Clause	Requirement-Test	Result-Remark	Verdict
	corrected vision without additional magnification. One min		
	after the load has been removed, there		
	shall be no permanent deformation exceeding 3 mm.		
	The electrical safety shall not be impaired.		
	In case of doubt, the test of 14.1.3 is carried out on the		
	sample to check that the declared degree		
	of protection against access to hazardous parts is		
	maintained. The declared degree of protection		
	against access to hazardous parts is either the additional		
	letter directly declared by the		
	manufacturer according 6.7.3, if any, or the degree of		
	protection against access to hazardous		
	parts indirectly declared by the manufacturer according		
	6.7.1.		
	10.5.104 Load test for application - Force applied through		P
	large surface area		
	The test is carried out on an assembly made of one or more		
	trunking lengths or ducting lengths		
	with the relevant system component, if any, to fulfil the		
	various functions of the system and		
	prepared according to the manufacturer's instructions.		
	More than one assembly may be necessary		
	to fulfil the various functions of the system. In each

Clause	Requirement-Test	Result-Remark	Verdict
14.1	Degree of protection provided by enclosure		P
	Add after the third paragraph the following:		P
	The assembly is placed in such a way that the upper surface		
	of floor is in the horizontal plane.		
	The test floor is flat and extends 100 mm \pm 10 mm		
	beyond the edges of the samples.		
	Replace the fourth paragraph by:		
	The following ageing treatment is carried out on assemblies		
	including non metallic system		
	component or composite system component before the tests		
	of 14.1.1, 14.1.2 and 14.1.3.		
	14.1.2.2 Add after the third paragraph the following:		
	For service unit and access unit the formula is:		
	5 x 10-3 x internal volume of the service unit or access unit.		
	14.1.3.1 Add the following paragraph:		
	Service units are tested with the cover opened.		
	Additional subclauses:		P
	14.101 Protection against corrosion by wet screed material		P
	Parts of CTS/CDS intended to be in contact with wet screed		
	material which are made entirely or		
	partially of metal shall have adequate protection against		
	corrosion.		
	For small fixing devices, such as screws, nuts and the like a		
	coating of grease is deemed to be a		
	sufficient protection against rusting.		
	Compliance is checked by the following test.		
	The sample is degreased by immersion in white spirit with a		
	kaury-butanol value of 35 \pm 5 or an		
	equivalent degreasing agent for 10 min \pm 1 min.		
	After degreasing the sample is submitted to a test according		
	to EN 60068-2-60 using test		
	method 1 with test duration of 4 days.		
	After exposure, the surface shall show no areas of red rust.		
	White rust (zinc oxide) and traces of		
	red rust which are removable by rubbing as well as traces of		
	rust at the surface of cuts, bent		
	edges and welded joints are ignored.
